

TipperSafe

Tipper truck stability system – preventing vehicles overturning on uneven ground

Features

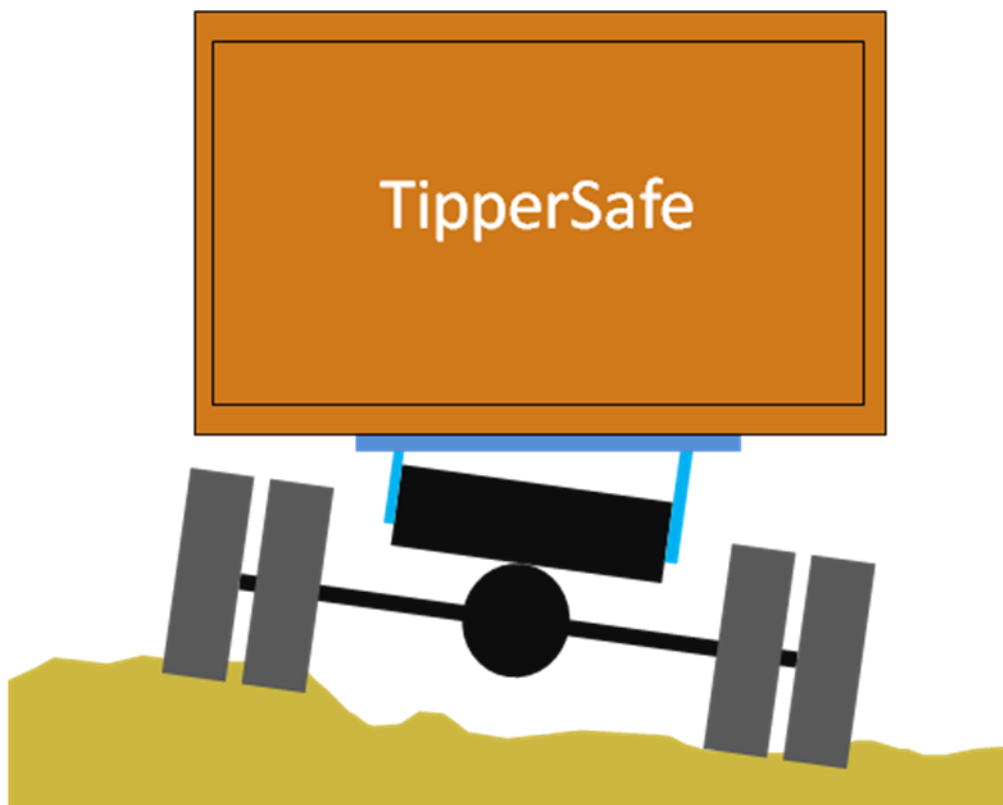

- Patent pending GB 2484730
- Automatic leveling system for tipping loads on uneven ground
- Hydraulic rams operate off of existing hydraulic system
- Low cost / low weight solution

Performance

- Suitable for all hydraulically operated tipper vehicles
- Automatically adjusts tipper pivot bar to the horizontal position
- Allows safe tipping of loads with ground cross fall +/- 15 deg
- Automatic safety shut off

Options

- Factory fitted by commercial vehicle body builders
- Retrofit kits for existing fleets

Specification

Tipper vehicle stability system may be manufactured under License which can be obtained from Ambar Kelly Limited. Safe operation of TipperSafe on uneven ground is within the cross fall limits of +/- 15 degrees from the horizontal, automatic cut off will prevent operation outside the limits. TipperSafe can be factory or retrofitted to existing fleets, contact us for further details or to arrange a demonstration of TipperSafe in use.
